- o Terrain Traversability Mapping and Navigation System (Accepted to RSS 2022 and Autonomous Robots): We built a traversability estimation system for unstructured environment and excavator applications, including perception, navigation and control. We built the infrastructure and first prototype of our navigation system in unstructured worksite.
- Terrain Classification with Adpative Scheduling Control (Accepted to ICRA 2023): We proposed a terrain classification network using both visual and inertial information of the terrain. Our method can make accurate prediction known terrain and generalize to unknown terrain based on its navigation properties. We implemented a adaptive control framework that can lead to better navigation result.
